Word in a Dictionary is used by Numerous Users

Is it true that the words in our dictionaries are really the “standard” language?

Don’t you think “to google” should be contained in a dictionary?

What about “to search”?

Experiment:
input= Wikipedia entry names (4,000 nouns)
positive examples = 2,598 nouns (listed in dictionary*)
negative examples = 1,402 nouns (not listed in dictionary)

Experiment:

<table>

(freq(w): frequency of using word w. Rfreq(w): rank of freq(w). user(w): number of users of a word w. Ruser(w): rank of user(w).)

This study tells us the word lists possibly in the future dictionaries!
